ENVIRONMENTAL MANAGEMENT SYSTEM

A large, light blue, stylized flower watermark is centered on the page. It has six petals, each with a white arrow pointing outwards from the center. The text "Edelweiss Logistics" is written across the top petals.

“Edelweiss Logistics ” MMC

ENVIRONMENTAL POLICY STATEMENT

DOCUMENT TITLE:**ENVIRONMENTAL MANAGEMENT SYSTEM**

Edelweiss Logistics' (EDWL) strategy is to ensure sustainable growth of company's positive environmental footprint by being a "Logistics Partner of Choice".

EDWL strives to achieve high performance standards for energy consumption and environmental impact throughout the organization.

EDWL recognizes that its operational processes have the potential to negatively impact the environment and believes that company employees must take personal and collective responsibility for protection of the environment based on company's clear guidelines by focusing on sustainable performance results and based on common sense, as there is still an awful lot of room for improvement when it comes to preventing pollution, saving energy, and limiting greenhouse gases, which means going far and above compliance.

EDWL main goals are:

- To set a tone to the entire organization what is of utmost importance to our organization, beyond financial and budgetary concern.
- To manage the efficient use of resources at the corporate and business level to minimize the generation of waste and harmful substances.
- To act proactively to exceed the requirements and targets set by existing legislation and regulations and to plan ahead for future compliance.
- To embrace customer interest and internationally recognized goals when setting internal targets and developing procedures to control energy use in offices, GHG emissions generated by the international & local transport means utilized, paper utility trends, waste recycling in offices and material disposal in warehouses.
- To provide and maintain, as far as possible, a pollution-free environment for our workforce, for the wider public with whom they interact and for future generations.
- To provide a common framework that adopts and supports best practices for energy and environmental management at all levels within our company.
- Allocate appropriate resources to ensure effective implementation of this policy.
- Encourage the development of similar policies within our sources of supply.

The goals of this policy will be achieved as a result of the leadership, proper management and responsible approach shown by the staff of EDWL.
